

AS204 – Junior Quality Engineer

Ruolo e Responsabilità

Area: Quality Assurance, Customer Quality, Quality Engineering

Industry: Multinational Medical Technology Company, worldwide Leader in Cardiovascular & Neuromodulation solutions.

Scope: In order to strengthen our QA team, we are looking for 4 Quality Engineers.

The Quality Engineer contributes to ensure that production and process control activities are conducted in compliance with the company quality system and the international regulations. He/She reports to the Supervisor, Quality Engineering and she works in international and cross-functional teams, closely collaborating with Process Engineers, R&D Engineers, Automation and Production Department.

Key Responsibilities:

With respect to **Nonconforming product handling**, He/She:

- Collects and analyzes data, taking disposition decision on nonconforming products.
- Leads proper investigation to identify the causes of components / product failures.
- Generates the evaluation of the risk posed by the observed nonconforming on products already distributed.
- Whenever applicable, supports external manufacturers of semi-finished and finished products in the management of any detected non conformities.

With respect to the **Design Control & Production and Process control**, He/She:

- Establishes product quality control plans.
- Reviews process validation planning, protocols and reports.
- Coordinates investigations of the cause of Verification & Validation failures (V&V).
- Identify opportunities of quality improvements in the production area and lead improvement plan.

In the field of **Customer Quality**, He/She is in charge of:

- Detection, investigation and evaluation of incoming customer complaints, both local and international.
- Creating reports and data analysis; writing final reports and responses for both local and international customers;
- Implementation of authority demands (e.g., FDA) as well as the coordinating and processing of global corrective action in field.
